Category Name Design-Segment-level

Actionee HAIS

Sub Category Operations Concept

Subject No operations plan

Description of Problem or Suggestion:

No day-in-the-life operations plan is given, showing how the system is designed to be used.

Originator's Recommendation

Generate a day-in-the-life operations plan, describing how the system is designed to be used. The description would include (at least) normal operations, a representative failure, a software upgrade, and a reschedule. There should be a different description for each "era" of the system (IR-1/Release A, Release B, at least).

HAIS Response Date 3/16/95

We agree and are in the process of establishing a set of Release A Day-in-the-Life operational scenarios for each DAAC that will cover normal as well as representative failures for the various operational activities, on a release by release basis. These scenarios will be placed under change control by the ECS developers. These scenarios will be the basis for ops telecon discussions as well as be presented at future IDRs and CDRs.
